1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, 19 and 20, drawn to a vector comprising a human protein translation peptide elongation factor-1 alpha promoter, a nucleic acid encoding a tetracycline controlled transactivator, a tetracycline inducible operator binding element, and a gene of interest under the control of the promoter, a host cell comprising said vector, and a method of expressing a gene of interest in a cell by using inducer of the tetracycline inducible operator binding element.

Group II, claim(s) 9, 10 and 18, drawn to a non-human animal comprising the vector of group I, and a method of screening an anti-tumor drug by using a transgenic non-human animal.

Group III, claim(s) 8 and 11-17, drawn to a method of generating a reverse tetracycline controlled transactivator expression system for inducible tetracycline regulated gene expression, a vector generated by said method, and a cell comprising said vector.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of group I is a vector comprising EF-1 alpha promoter, nucleic acid encoding a tetracycline controlled transactivator and a tetracycline inducible operator binding element and a host cell comprising said vector. The special technical feature of group II is a non-human animal comprising the vector set forth above. The special technical feature of group III is an expression system comprising a nucleic acid encoding a reverse tetracycline controlled transactivator and a host cell comprising said vector. The special technical feature of groups I and II lack common core structure and lack common property and activity: vector or cell vs non-human animal. Similarly, the special technical feature of groups II and III lack common core structure and lack common property and

activity. The vector comprising EF-1 alpha promoter and nucleic acid encoding a tetracycline controlled transactivator of group I and the expression system comprising a nucleic acid encoding a reverse tetracycline controlled transactivator of group III do not share common core structure or significant structural element. Thus, groups I-III do not share common special technical feature. Therefore, Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
